GENERAL: the ideal Balinese is a svelte cat with long tapering lines, very lithe but strong and muscular. The Balinese is unique with its distinct range of colors and silky coat that hides a supple and athletic body. A study of contradictions - elegant refinement, in reality firm and muscular. Excellent physical condition. Neither flabby nor bony. Not fat. Eyes clear. Balance is critical, all parts should come together in a harmonious whole, with neither too much nor too little consideration given to any one feature. Because of the longer coat the Balinese appears to have softer lines and less extreme type than their shorthaired parent breeds of similar body type.

HEAD: long, tapering wedge. Medium size in good proportion to body. The total wedge starts at the nose and flares out in straight lines to the tips of the ears forming a triangle, with no break at the whiskers. No less than the width of an eye between the eyes. When the whiskers and face hair are smoothed back, the underlying bone structure is apparent. Allowance must be made for jowls in the stud cat.

SKULL: flat. In profile, a long straight line should be felt from the top of the head to the tip of the nose. No bulge over the eyes. No dip in nose.

EARS: strikingly large, pointed, wide at base, continuing the lines of the wedge.

EYES: almond shaped. Medium size. Neither protruding nor recessed. Slanted towards the nose in harmony with lines of wedge and ears. Uncrossed.

NOSE: long and straight. A continuation of the forehead with no break.

MUZZLE: fine, wedge-shaped.

CHIN and JAW: medium size. Tip of chin lines up with tip of nose in the same vertical plane. Neither receding nor excessively massive.

BODY: medium size. Graceful, long, and svelte. A distinctive combination of fine bones and firm muscles. Shoulders and hips continue same sleek lines of tubular body. Hips never wider than shoulders. Abdomen tight. The male may be somewhat larger than the female.

NECK: long and slender.

LEGS: bone structure long and slim. Hind legs higher than front. In good proportion to body.

PAWS: dainty, small, and oval. Toes: five in front and four behind.

TAIL: bone structure long, thin, tapering to a fine point. Tail hair spreads out like a plume.

COAT: medium length, longest on the tail. Fine, silky without downy undercoat lying close to the body, the coat may appear shorter than it is.

COLOR: Body: even, with subtle shading when allowed. Allowance should be made for darker color in older cats as Balinese generally darken with age, but there must be definite contrast between body color and points. **Points:** mask, ears, legs, feet, tail dense and clearly defined. All of the same shade. Mask covers entire face including whisker pads and is connected to ears by tracings. Mask should not extend over top of head. No ticking or white hairs in points. **Eye color:** deep vivid blue.

PENALIZE: lack of pigment in the nose leather and/or paw pads in part, or in total, except as allowed in the color definitions for lynx and tortie points. Crossed eyes. Visible protrusion of the cartilage at the end of the sternum under normal handling. Soft or mushy body.

DISQUALIFY: any evidence of illness or poor health. Weak hind legs. Mouth breathing due to nasal obstruction or poor occlusion. Malocclusion resulting in either undershot or overshot chin. Emaciation. Visible kink in tail. Eyes other than blue. White toes and/or feet. Incorrect number of toes. Definite double coat (i.e., downy undercoat).
