PATTERN .......................................................... 25

GENERAL: the Ocicat is a medium to large, well-spotted agouti cat of moderate type. It displays the look of an athletic animal: well-muscled and solid, graceful and lithe, yet with a fullness of body and chest. It is alert to its surroundings and shows great vitality. There are twelve accepted Ocicat colors divided into eight color classes with all specimens possessing darker spots which appear in deep contrast to a lighter background. The determining factor in answering any and all questions as to the correct color of an Ocicat will be the color of the tail tip without any comparison to the color of other body markings (see Ocicat colors). Each hair (except on the tip of tail) has several bands of color. It is where these bands fall together that a thumbnail shaped spot is formed. This powerful, athletic, yet graceful spotted cat is particularly noted for its "wild" appearance.

HEAD: the skull is a modified wedge showing a slight curve from muzzle to cheek, with a visible, but gentle, rise from the bridge of the nose to the brow. The muzzle is broad and well defined with a suggestion of squareness and in profile shows good length. The chin is strong and the jaw firm with a proper bite. The moderate whisker pinch is not too severe. The head is carried gracefully on an arching neck. An allowance is made for jowls on mature males.

EARS: alert, moderately large, and set so as to corner the upper, outside dimensions of the head. If an imaginary horizontal line is drawn across the brow, the ears should be set at a 45 degree angle, i.e., neither too high nor too low. When they occur, ear tufts extending vertically from the tips of the ears are a bonus.

EYES: large, almond shaped, and angling slightly upwards toward the ears with more than the length of an eye between the eyes.

TORSO: solid, hard, rather long-bodied with depth and fullness but never coarse. The Ocicat is a medium to large cat with substantial bone and muscle development, yet with an athletic appearance, and should have surprising weight for its size. There should be some depth of chest with ribs slightly sprung, the back is level to slightly higher in the rear, and the flank reasonably level. Preference is given to the athletic, powerful, and lithe, and objection taken to the bulky or coarse. It should be noted that females are generally smaller than males. The overall structure and quality of this cat should be of greater consideration than mere size alone.

LEGS and FEET: legs should be of good substance and well-muscled, medium-long, powerful and in good proportion to the body. Feet should be oval and compact with five toes in front and four in back, with size in proportion to legs.

TAWNY (brown spotted tabby): black or dark brown spotting on a ruddy or bronze agouti ground. Nose leather: brick red rimmed with black. Paw pads: black or seal. Tail tip: black.

OCCICAT COLORS

Ocicat Show Standard (revised 2011)

©2020 The Cat Fanciers’ Association, Inc.
LAVENDER: lavender spotting on a pale buff or ivory agouti ground. **Nose leather:** pink rimmed with dark lavender. **Paw pads:** lavender-pink. **Tail tip:** lavender.
